Introduction

These MYOB PayGlobal Employee Self Service (ESS) release notes describe the software enhancements and issues resolved in release versions ESS 5.4.8.0.

If you are upgrading from an earlier version than ESS 5.4.7.2, then you need to download and read the relevant release notes from the website

Disclaimer

Information in this document is subject to change without notice and does not represent a commitment on the part of **MYOB NZ Limited and MYOB Australia Pty Ltd**. While every effort has been made to ensure that the information contained within this document and the features and changes described are accurate, **MYOB NZ Limited and MYOB Australia Pty Ltd** cannot accept any type of liability for errors in, or omissions arising from the use of this information.

Notifications

This section outlines important information regarding this release.

Microsoft Exchange Online (Office365) Deprecation of Basic Authentication

Microsoft has advised that they are removing basic authentication from SMTP and EWS integrations with Exchange Online (Microsoft365 or Office 365) from January 2023. Customers with PayGlobal ESS integrations to Exchange Online (Microsoft365 or Office365) for sending emails and managing calendar events will **need to upgrade** or run the risk of these feature no longer working.

Dependency on PayGlobal 4.53.0

This version of the MYOB PayGlobal Employee Self Service (ESS) requires a minimum version 4.53.0 of PayGlobal.

*DO NOT UPGRADE TO ESS 5.4.7.1 OR LATER UNTIL PAYGLOBAL HAS
BEEN UPGRADED TO AT LEAST 4.53.0*

.Net Framework 4.7.2 Update

For Self-Service (web site and workflow engine) the .Net Framework version has been updated to 4.7.2. For you to use ESS 5.4.7.1 or later you will need to ensure that your Web server and Workflow engine server both have .Net 4.7.2 installed at a minimum.

Enhancements

This chapter describes software enhancements in this release version.

Enhancements - All Countries

ESS Support for SMTP with SSL Encryption

When enabled (SMTP server enable SSL) with the Config Editor tool, ESS will be able to send emails using the SMTP protocol to email servers which require the communication to be SSL (Secure Sockets Layer) encrypted.

ESS Support for modern authentication with Exchange Online

ESS (and Workflow Engine) now supports OAuth2 authentication with Exchange Online (also known as Microsoft365 or Office365) to continue sending of emails and managing calendar appointments from the PayGlobal product.

Exchange Online (also known as Microsoft365 or Office365) also requires communication from ESS to be securely encrypted with TLS1.2. This is achieved with a simple update to the web.config for ESS and Workflow Engine (`<httpRuntime targetFramework="4.7.2"/>`).

SMTP and EWS with basic authentication will still be available for those customers integrating with other email services or hosting their own Exchange server.

Workflow Engine Default Credential Usage (Breaking Change)

By setting the "server requires authentication" setting to true, the Workflow Engine previously enabled the use of default network credentials for authentication. This is no longer the case and customers will need to explicitly set enable the use of default network credentials if this behaviour is desired.

Issues

This section describes issues resolved in this release version.

Issues - All Countries

Send ESS Setup Details to PayGlobal Support Team

A bug has been fixed where the email was not sent to MYOB PayGlobal Support with the details of the ESS setup when "Send to Support" requested on the Admin Login -> General -> About screen.

Reference Number: PGDEV-6392

Additional information

Help URL

The Help file for this version has changed.

The current Help root URL is now: <http://customer.payglobal.com/manuals/ESS/5.4.8>

Version Compatibility

It may be necessary to run the ConfigUpdater.exe utility within ESS after this upgrade is performed to ensure dependent components are referenced correctly.
