
MYOB IMS Payroll 7.10 Hotfix

Release Notes

November 2025

What's new?

This hotfix resolves an issue where FBAPS leave reports weren't displaying a dollar value for casual employees whose leave is paid in days.

The build number for this hotfix is 7.10.0.4353.

Installing your upgrade

If you're on version 7.00 or earlier, you can upgrade directly to this hotfix version. You'll also get all the improvements we added in the original 7.10 release. For details about those improvements, [see the 7.10 release notes](#).

For IMS Payroll Cloud, you don't need to install the upgrade, because the leave report issue is resolved automatically.

Before upgrading

Note: For this hotfix, you don't need to close any pay periods before upgrading.

- Back up each of your payroll companies via the **Tools** menu.
- Close all IMS applications on your PC.
- Do not uninstall an earlier version of IMS Payroll. It's not necessary and you would need to reinstall any custom payroll software or modules.

Installing your upgrade

1. Download the installer from the MYOB email you received.
2. Double-click the installer file (.exe) that you downloaded.
3. Install the new version on every computer that has MYOB IMS Payroll installed.
