# What is a MAK?

A multiple activation key (MAK) is a special registration code for MYOB Advanced that is issued in a partner's name, for a specific edition, set number, and type of user licences.

A MAK has a pre-set number of activations and can be used on multiple machines within the partner's organisation.

The purpose of MAKs is to provide partners with a single key that all staff in their business can use, reducing administrative overhead.

## Registering MYOB Advanced

Your MAKs will have been issued to you by the MYOB ED Administration team.

1. Log in to your installation of MYOB Advanced as an administrator. If unlicensed, you will immediately be directed to the licence administration screen, otherwise navigate to the **Configuration > Common Settings > Licence Maintenance** form (SM.20.15.10).
2. If you are changing your key for another key you must first delete the existing licence using the **Delete Licence** button.
3. Click **Enter Licence Key**. The Activate New Licence popup appears:

4. Enter the licence key as issued by MYOB and click **OK**. Note it is case-sensitive and internet connection is required to validate the key.
5. Click **Apply Licence** to licence the installation.

## Important Notes

- MYOB Advanced will not operate without a valid licence key.
- MAKs can only be used on the locally installed version of MYOB Advanced.
- An active internet connection is required when entering the licence key.
- Deleting the MAK from an installation will make it available for re-use on another installation.
